

Solidevent CAD/CAM Seminar

Solidtec Solutions are excited to invite you to...
Manufacturing Solutions for SolidWorks a CAD/CAM Seminar

This **FREE** Seminar, guided by one of our Certified SolidWorks Instructors will introduce SolidWorks 'Geometric Products Collaboration' 'CamWorks and MetalWorks'.

Refreshments available, we look forward to seeing you there!

Hurry... places are limited - Don't forget to RSVP

MetaWorks-SW is a highly advanced integrated sheet metal programming solution that ties the core engine of MetaCAM seamlessly into the SolidWorks design environment. The integrated application will process/translate SolidWorks models into sheet metal parts with the defined tooling technology right from your SolidWorks window. MetaWorks-SW can easily convert models (SLDPRT) or entire assemblies (SLDASM) into programmed parts and nested sheets. The software is designed for the SolidWorks power user who can benefit from the interface.

CAMWorks is an intelligent, intuitive CAM application that eliminates the drudgery of CNC programming. In today's manufacturing scenario, getting products to market faster, more efficiently and within budget is essential. To achieve this level of complex hands-free programming, CAMWorks incorporates intelligent machining through automation.
